## EXPERIENCE:

- **Mobile App Developer Freelancer - Mostaql.com | مستقل** [\[Profile Link\]](#)  
“April 2025 – Present”
- **Flutter Development Diploma – Route IT Training Center** [\[Certificate Link\]](#)  
“February 2025 – June 2025” (4 months)
- **DEPI Microsoft ML Engineer - Digital Egypt Pioneers Initiative (DEPI)** [\[Certificate Link\]](#)  
“October 2024 – May 2025” (8 months)
- **Flutter App Development Intern - Uneeq Interns** [\[Certificate Link\]](#)  
“1 March 2025 - 25 March 2025” (1 month)
- **Mobile Application Developer Intern - CodeAlpha** [\[Certificate Link\]](#) & [LOR Link](#)  
“1 March 2025 - 30 March 2025” (1 month)
- **Mobile Application Developer by Flutter Internship - Telecom Egypt** [\[Certificate Link\]](#)  
“July 2024 - September 2024” (3 months)

## PROJECTS:

- **Multi-Emotion Recognition for Customer service** (Graduation Project: *Grade A*) (July 2025)  
An enterprise-grade Flutter application for AI-powered emotion detection and customer sentiment analysis. Features Clean Architecture with BLoC state management, dual role-based interfaces (admin/employee), real-time video emotion recognition with 10-15s processing time, comprehensive analytics dashboards, ticket management system, and multi-modal analysis (text/voice/video). Implemented advanced UI animations at 60fps, professional snapshot capture with emotion overlays, secure authentication, and responsive cross-platform design (Android/iOS/Web). Demonstrates expertise in machine learning integration, enterprise software architecture, and scalable mobile application development for business intelligence solutions.
- **Personal Portfolio Website** (October 2025)  
High-performance Flutter web application featuring responsive design, glass morphism UI, and 10+ project showcases. Implemented GetX state management achieving 70% performance improvement, integrated EmailJS for contact functionality, and optimized for static deployment on GitHub Pages. Built modular component library with theme switching, skeleton loading, and smooth animations maintaining 60 FPS across all devices.
- **Gogesh – E-Commerce App** (September 2025)  
A full-stack Flutter e-commerce application connecting buyers and sellers with dual-interface support. Integrated custom REST API backend with PayTabs payment gateway, BLoC state management, and real-time functionality. Features include product listings with image galleries, advanced search and filtering, persistent shopping cart, seller dashboard with analytics, real-time chat support, and push notifications.

- [Sprints Shop App](#) (July 2025)  
A full-featured Flutter shopping application with user authentication, product catalog, shopping cart, and secure payment integration. Built with comprehensive Arabic localization using Flutter Intl, custom fonts, and animated transitions. Developed through progressive learning from core Dart fundamentals to advanced mobile development, demonstrating end-to-end e-commerce functionality and clean architecture principles.
- [Music Player App](#) (March 2025)  
A Flutter music player application with a modern UI and rich features. This app allows users to browse, play, and manage their music library with ease. It supports various functionalities such as playback controls, volume adjustment, playlist management. *This project was a task assigned during my internship at Uneeq Interns.*
- [Chat App](#) (March 2025)  
A sleek, cross-platform messaging application built with Flutter featuring dark and light modes. This app includes user authentication with Firebase, real-time messaging capabilities, and a clean, minimalist UI. Users can register, log in, and chat with other users in an intuitive interface. *This project was a task assigned during my internship at Uneeq Interns, where I applied my skills to create a functional and polished application.*
- [Online Exam App](#) (March 2025)  
Built a Flutter app for random quotes with search, categories, favorites, and sharing. Integrated Quotable API, managed state, and designed a clean UI. *This project was a task assigned during my internship at Uneeq Interns, where I applied my skills to create a functional and polished application.*
- [ChargeHub App - EV and gas station finder app](#) (September 2024)  
Built An EV and gas station finder app using Flutter and Firebase, featuring user authentication, interactive maps, and a car listing section for EV recommendations. The app utilizes BLoC state management for efficient navigation and station updates; this was Graduation project for *WE* Internship.
- [Market WE - Marketplace App](#) (September 2024)  
A Flutter-built mobile marketplace for buyers and sellers. Browse, buy, and sell products on the go with secure payments, real-time updates, and cross-platform support for Android and iOS.

## EDUCATION:

---

- **Nile University – Giza, Egypt**  
Bachelor of Computer Science

## SKILLS:

---

- **Languages:** Dart, Python, Java, C++, JavaScript, SQL
- **Mobile Development:** Flutter (Android/iOS/Web), Native UI/UX Design, Responsive Web Applications
- **State Management:** GetX, BLoC Pattern, Provider, Riverpod
- **Backend & APIs:** RESTful API Integration, Firebase (Authentication, Firestore, Cloud Storage), Supabase, Custom Backend Integration
- **Cloud Services:** Firebase, GitHub Pages, Vercel
- **Communication:** EmailJS, Firebase Push Notifications, Firebase Real-time Messaging

## Language skills:

Arabic (Native speaker) / English (Fluent - Excellent writing and reading skills)
